11th & Market Streets
Wilmington, DE 19801

SPEAKER:
Dr. Robert L. Waugh

PRESENTATION TITLE:
"Clinical Systems for Success
in Contemporary Practice"

SESSION INFORMATION

“Clinical Systems for Success in Contemporary Practice”

Description:

Today’s orthodontists use a variety of advanced systems to supplement their traditional diagnostic and treatment methods as they help their patients achieve optimal smiles. Expanding the practice services to include the most relevant therapies and equipment requires knowledge of both what is possible and what is purposeful to pursue. With the downward trend in today’s economy trimming most budgets, it becomes necessary even more important to carefully invest time and money in systems that work well and make a difference in everyday practice.

This presentation will focus on the consideration of the several clinical systems designed to enhance the care of orthodontic patients. With an emphasis on quality of care and clinical implementation, the discussion will include a review of soft tissue diode lasers, 3D CBCT Imaging, advanced Oral Hygiene measures, systematic photography and emergency protocols. In addition, a variety of clinical treatment systems will be shown including the latest research and practice methods for improved smile displays and finishing efficiency.

Course Objectives:

Following this presentation participants will:

- Be able to describe the importance of the correlation between the size of the teeth and the size of the dental arch
- Have a system of completing patient care in patients with excessive pre-treatment spacing that minimizes the use of bonding
- Apply Golden Ratio to orthodontics and be able to plan treatment to create tooth size, shape, and position to achieve Golden Ratio or better (“Platinum” ratio)
- Recognize periodontal limitations placed on the use of the dental laser
- Understand when the use of dental laser in the various stages of orthodontic treatment can maximize treatment efficiency
- Be able to differentiate between various dental laser features and how to select the one that best suits their personal preferences and needs
- Understand how to apply three-dimensional imaging to patient diagnosis and treatment planning

MEET THE SPEAKER

Dr. Robert L. Waugh

Dr. Bob Waugh practices orthodontics full-time in Athens, Georgia, where he lives with his wife of 22 years, Susan, and their four children. He graduated OKU from the Medical College of Georgia School of Dentistry in 1987 with both his DMD and a MS in Oral Biology, and from Baylor’s Orthodontic Residency in 1989 with another Masters degree. In late 2008 he merged his practice into a state-of-

the-art 24-chair orthodontic facility designed for the use of advanced treatment concepts like 3-D imaging, the use of TADs and the dental laser, and more.

Dr. Waugh is also a teacher, both as an Assistant Professor of Orthodontics at The Medical College of Georgia and as a lecturer who speaks year-round on the use of the dental laser and on dental esthetics in orthodontics to universities and study clubs across the country. He teaches in-office laser courses with live patients and is a speaker at the World Clinical Laser Institute Super Symposium in San Diego every year. A Diplomate of the ABO, Dr. Waugh was president of his state AAO constituency and is a member of both The American College of Dentists and International College of Dentists.

PROGRAM

8:00AM – 9:00AM	Registration and Continental Breakfast
9:00AM – Noon	Seminar
Noon – 1:00PM	Lunch
1:00PM – 4:30PM	Seminar continuation
